

Release Notes: Zim 8.20 for Windows, Build 1615 (May 3rd, 2010)

Bug fixes and minor changes (Zim Thin Client):

Zim Thin Client

- **Menus(and associated toolbars) not allowed in child windows. Enforced by Microsoft in Visual Studio 2008. There is no workaround for this.**
- Improvements to scrolling in dynamic list boxes
- Correction to height calculation for child windows
- Fixed garbage characters being displayed in zimtc backscreen under certain conditions
- Fixed pc bell ringing on form input command (caused by previous “form set...” commands
- No event was being generated for f77
- Was unable to access parent windows in non-modal windows environment with child windows.
- Improvements to “form set” command. In tabbed forms, some properties were not being applied to the tab labels.
- Executing a “form set (normal)” command caused tab labels to change font and fontsize from their original values.
- Event table not was not updating values for event.ctrlkey, event.altkey, and event.shiftkey
- Menus and menu toolbars were not displaying/behaving correctly since migrating build environment to Visual Studio 2008.
- “menu set” command was not changing the label property for some menu items.
- Fixed caching problem for images in a repeated form.
- Fixing a minor locking issue when connected remotely from windows to linux via “zimserv”.
